The invention relates to novel broad-spectrum resistance gene Pi2 and the NBS(1-6) genes present in the Pi2 gene cluster region. The rice Pi2-like disease resistance nucleic acid molecules are useful for enhancing disease resistance in plants. The present sequence represents a rice NBS2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New rice Pi2-like disease resistance nucleic acid molecule that confers disease resistance in plants, useful for creating or enhancing disease resistance in plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pi2; NBS2; plant protectant; gene therapy; rice; disease resistance.

The invention comprises the amino acid and coding sequences of nucleotide binding site (NBS) proteins from the Oryza minuta Pi9 locus (bacterial blight and rice blast resistance genes). The DNA sequences may be used as markers for resistance to infection with Magnaporthe grises in plant breeding programs. The present amino acid sequence represents an NBS protein encoded by a gene from the Oryza minuta Pi9 locus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                        The invention comprises the amino acid and coding sequences of nucleoti binding site (NBS) proteins from the Oryza minuta P19 locus (bacterial blight and rice blast resistance genes). The DNA sequences may be used markers for resistance to infection with Magnaporthe grises in plant breeding programs. The present amino acid sequence represents an NBS protein encoded by a gene from the Oryza minuta P19 locus.
                                                                                                                                  Nucleic acids encoding nucleotide binding site (NBS) proteins NBS1, NE and NBS3, useful for producing plants resistant to Magnaporthe grisea
                                                                                                                                                                                                                                                                                                                                                                 KNNKKGSRIVITTRNVDLAEKCATASLVYHLDFLOMNDAITLLLRKTNKNHEDMESNKNM

              The invention relates to novel broad-spectrum resistance gene Pi2 and the NBS(1-6) genes present in the Pi2 gene cluster region. The rice Pi2-like disease resistance nucleic acid molecules are useful for enhancing disease resistance in plants. The present sequence represents a rice NBS6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             TNANDGPAKVICVVGMGGLGKTALSRKIFESEEDIRKNFPCNAWITVSQSFHRIELLKDM 238

The invention comprises the amino acid and coding sequences of nucleotide binding site (NBS) proteins from the Oryza minuta Pi9 locus (bacterial blight and rice blast resistance genes). The DNA sequences may be used as markers for resistance to infection with Magnaporthe grises in plant breeding programs. The present amino acid sequence represents an NBS protein encoded by a gene from the Oryza minuta Pi9 locus.

                                                                                                                                                                                                                               The invention relates to novel broad-spectrum resistance gene P12 and the NBS(1-6) genes present in the P12 gene cluster region. The rice P12-11ke disease resistance nucleic acid molecules are useful for enhancing disease resistance in plants. The present sequence represents a rice NBS1 polypeptide.

```

```
The invention comprises the amino acid and coding sequences of nucleotide binding site (NBS) proteins from the Oryza minuta Pi9 locus (bacterial blight and rice blast resistance genes). The DNA sequences may be used as markers for resistance to infection with Magnaporthe grises in plant breeding programs. The present amino acid sequence represents an NBS protein encoded by a gene from the Oryza minuta Pi9 locus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      12;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 240

The invention comprises the amino acid and coding sequences of nucleotide binding site (NBS) proteins from the Oryza minuta Pi9 locus (bacterial blight and rice blast resistance genes). The DNA sequences may be used as markers for resistance to infection with Magnaporthe grisea in plant breeding programs. The present amino acid sequence represents an NBS protein encoded by a gene from the Oryza minuta Pi9 locus.

The rice Pi2-like disease resistance nucleic acid molecules are useful for enhancing disease resistance in plants. The present sequence represents a rice NBS3

The invention relates to the isolation of novel rice blast fungus (Pyricularia grisea; also known as Magnaporthe grisea) resistance genes (Arom rice strain BL-1. The genes are designated Pi-b (AAA11349) and Pi-b, (AAA11351). The genes can be used for creating rice which has high blast fungus resistance. This sequence represents the protein encoded by the Pi gene

                                                                                                                                                                                                                                                                                                                                                                                                         ų,
                                                                                                                                                                                                           The invention comprises the amino acid and coding sequences of nucleotide binding site (NBS) proteins from the Oryza minuta Pi9 locus (bacterial blight and rice blast resistance genes). The DNA sequences may be used as markers for resistance to infection with Magnaporthe grisea in plant breeding programs. The present amino acid sequence represents an NBS protein encoded by a gene from the Oryza minuta Pi9 locus.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       280 FVVLDDLWILHDWNWINEIAFPXNNKKGSRIVITTRNVDLAEKCATAS-LVYHLDFLQWN 338
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           þe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention provides a protein which confers resistance to blast disease onto plants. The blast disease-resistance (Pt-b) protein can be expressed by standard recombinant methodology. The novel Pi-b gene is used to produce transgenic plants resistant to the rice blast disease, which will control the disease and increase crop yields. The present sequence represents the rice Pi-b protein. The resistance gene Pi-b is located at the end of the long arm of rice chromosome 2 and displays resistance to blast fungi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              resistant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     IAIRIHNLKSRVEEVSSRNTRYNLVEPISSGTEDDMDSYAEDIRNQSARNVDEAELVGFS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SLAHAVCPDQLRMLRVLDLEDVTFLITQXDFDRIALLCHLKYLSIGYSSSIYSLPRSIGK 625
                                                                                    The invention relates to novel broad-spectrum resistance gene Pi2 and the NBS(1-6) genes present in the Pi2 gene cluster region. The rice Pi2-like disease resistance nucleic acid molecules are useful for enhancing disease resistance in plants. The present sequence represents an O. minuta Pi2 gene predicted amino acid sequence
                       confers
                      molecule that confers
or enhancing disease

Expression of a novel RGH gene confers disease resistance to a plant by interacting with the complementing phytopathogen avirulence gene product released into the plant by the invading plant pathogen. The methods of the invention find use in controlling plant pests, including fungal pathogens, viruses, nematodes and insects
                                                                                                                                                                                                                                                                                                                                                                                                                                                          | | | | :::|:|||||||||| | : | | : | | EQSKCWMKEVRELSYDIEDSIDSFIFSLGCESNSEPRGFKGFVGRCLNLFADAKTRHWIA

The invention provides 13 novel maize, sorghum and rice RGH gene families (see AAZS8273 e.5) and their protein products (see AAXS8842-54). The novel RGH sequences can be used for the production of transgenic plants (and their

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Superfamily: disease resistance protein RPS2; leucine-rich alpha-2-glycoprotein repeat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 2

T12977

hypothetical protein T6H20.240 - Arabidopsis thaliana
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Decies: Arabidopsis thaliana (mouse-ear cress)
C;Decies: 13-Aug-1999 #sequence_revision 13-Aug-1999 #text_change 09-Jul-2004
C;Date: 13-Aug-1999 #sequence_revision 13-Aug-1999 #text_change 09-Jul-2004
C;Accession: T12977
R;Choisne, N.; Robert, C.; Brottier, P.; Wincker, P.; Cattolico, L.; Artiguenave, F.; Submitted to the Protein Sequence Database, July 1999
A;Reference number: 217586
A;Accession: T12977
A;Molecule type: DNA
A;Residues: 1-847 cCHIO>
A;Residues: 1-847 cCHIO>
A;Residues: Le47 cCHIO>
A;Residues: Le47 cCHIO>
